Name of the Field: Anatomy and Embryology/
Laboratory Animal Resource Center

Principal Investigator: Satoru Takahashi
E-mail address: satoruta@md.tsukuba.ac.jp
URL: http://www.md.tsukuba.ac.jp/basic-med/
anatomy/embryology/index.html

Major Scientific Interests of the Group

We are working on the functional analysis of transcription factors in the body by employing developmental engineering techniques such as the generation of transgenic mice.

Projects for Regular Students in Doctoral or Master’s Programs

1) Molecular mechanism of the development of pancreatic endocrine cells and macrophages.
   We are researching the molecular mechanisms of the development of pancreatic endocrine cells and macrophages. By analyzing the function of the large Maf family of transcription factors. In both human and mouse, four large Maf transcription factors, MafA, MafB, c-Maf and Nrl, have been identified.

2) Analysis about in vivo functions of sugar chains on molecules.
   In addition to these themes, we are also analyzing functions of sugar chains on molecules in vivo by using genetically manipulated mice.

Study Programs for Short Stay Students (one week ~ one trimester)

3) Histological analysis of genetically manipulated mice.
4) Handling skill for mouse embryos.

Assistant Professor Satoshi Kunita: kunitasa@md.tsukuba.ac.jp

Major Scientific Interests of the Group
The aims of our research are development, characterization and quality control of genetically induced animal models for human diseases. We focus on the following research themes:
1) We are creating a variety of mice in which genes regulating blood pressure (BP) are altered. Characterization of these mice allows us to develop hypertension models as well as to evaluate unknown functions of the genes. Additionally, quantitative trait loci (QTL) mapping of BP regulating genes is in progress by using spontaneously hypertensive mice to search novel genes associated with BP regulation.
2) In order to elucidate the molecular mechanisms associated with pathogenesis of infectious agents, such as parvovirus and Helicobacter, we are analyzing the interaction between infectious agents and host genes. Additionally, we continue to develop technology for creating genetically-induced mice and to survey microbiological infection in laboratory animals.

Projects for Regular Students in Doctoral or Master’s Programs
1) Development of embryonic stem cells in mice and rats.
2) Development of monoclonal antibody-based antigen detection methods for diagnosing infectious diseases in mice (such as Helicobacter hepaticus and murine norovirus infections).

Training Programs for Short Stay Students (one week ~ one trimester)
1) Manipulation of mouse preimplantation embryos.
2) Multiplex serologic tests for infectious diseases in mice and rats by microsphere fluorescent immunoassay.

Assistant Professor Tsunaki Hongu: thongu@md.tsukuba.ac.jp

Major Scientific Interests of the Group
Studies on regulatory mechanisms and physiological functions of cell signaling systems, especially through the phospholipid-metabolizing enzymes and the small G protein Arf6.

Projects for Regular Students in Doctoral or Master’s Programs
1) Molecular mechanisms through which the small G protein Arf6 regulates each isozyme of the lipid kinase PIP5K.
2) Physiological functions of the phospholipid-metabolizing enzymes, PIP5K and PLD, and of their regulatory protein Arf6 at cellular and whole animal levels.
3) Human diseases caused by the disruption of the signaling systems through the lipid-metabolizing enzymes and the small G protein Arf6.

Study Programs for Short Stay Students (one week ~ one trimester)
1) Enzyme assay, immunohistochemistry, and immunofluorescent staining of signaling molecules
2) Assays for cell functions such as cell proliferation, cell motility, focal adhesion, secretion, endocytosis, exocytosis, etc.

Other Faculty Members
Assistant Professor Tomoaki Mizuno: mizuno@md.tsukuba.ac.jp

Major Scientific Interests of the Group
- Post-transcriptional regulation of gene expression by RNA-binding proteins
- Molecular mechanism of mRNA localization and local translation regulating cell polarity, asymmetric cell division, and cell-fate
- Regulation of myogenic differentiation by RNA-binding protein
- Regulation of the endoplasmic reticulum stress response by protein kinases

Projects for Regular Students in Doctoral or Master’s Programs
1) Post-transcriptional regulation of gene expression by Khd1, Ccr4, and Pbp1 in yeast.
2) Stability control of MTL1 mRNA by the RNA-binding protein Khd1 in yeast.
3) Stau1 negatively regulates myogenic differentiation in C2C12 cells.
4) Regulation of the endoplasmic reticulum stress response by protein kinases

Study Programs for Short Stay Students (one week ~ one trimester)
1) Yeast genetic approaches including the isolation and characterization of mutants, tetrad analysis, complementation, and mitotic recombination.
2) Molecular genetic techniques including yeast transformation, gene knockout, and generation of mutations in cloned genes.
3) Imaging yeast cells using indirect immunofluorescence and GFP-protein fusions.

Recent Publications
Major Scientific Interests of the Group

Our group studies the regulation of eukaryotic gene expression, focusing on how transcription regulates cell differentiation. In particular, we are studying the roles of transcription factors and epigenetic changes in regulating iPS cell induction and adipocyte differentiation.

Projects for Regular Students in Doctoral or Master’s Programs
1) Mechanistic analyses of the roles for Oct4, Sox2, Klf4 and c-myc during iPS cell induction.
2) Analyses of epigenetic mechanisms of iPS cell induction.
3) Identification and functional analyses of transcription factors involved in adipocyte commitment.
4) Role of non-coding RNA in epigenetic regulation during adipocyte differentiation.

Study Programs for Short Stay Students (one week ~ one trimester)
1) Analysis of transcriptional regulation during white and brown adipocyte differentiation.
2) Induction of iPS cells using a Sendai virus-based vector.

Other Faculty Members
Assistant Professor: Manabu Matsuda, Akihiro Kawashima

Major Scientific Interests of the Group
1. Molecular mechanisms involved in the spermatogenesis and sperm maturation in mammals
2. Signal transduction in germ cells
3. Biology of mammogenesis, milkstasis and secretion

Projects for Regular Students in Doctoral or Master’s Programs
1) Proteome analysis of calcium-binding proteins expressed in the spermatogenic cells.
2) Molecular mechanisms of the sperm maturation during transit through epididymis.
3) Role of the protein tyrosine phosphorylation in capacitation.

Study Programs for Short Stay Students (one week ~ one trimester)
1) Technology for proteome analysis.
2) Assessment of mammalian sperm fertilizing activities.
3) In vitro studies on functions of monoamines in secretion.

Lecturer: Kazuko Keino-Masu: kazumasu@md.tsukuba.ac.jp
Assistant Professor: Takuya Okada: okada.takuya.gw@u.tsukuba.ac.jp

Major Scientific Interests of the Group
Our main research focus is to study the molecular mechanisms that regulate the neural circuit formation and higher brain functions. Using integrative approaches including molecular biology, biochemistry, pharmacology, developmental biology, and neuroanatomy, we have been investigating how complex networks are formed in the developing brain and how the mature brain functions are acquired and regulated. We are particularly interested in the molecules that play a role in neural differentiation, cell migration, axon guidance, and synaptogenesis.

Projects for Regular Students in Doctoral or Master’s Programs
1) Molecular study on neural differentiation
2) Molecular study on axon guidance
3) Molecular study on neural cell migration

Training Programs for Short Stay Students (one week ~ one trimester)
1) Immunohistochemistry
2) In situ hybridization

Major Scientific Interests of the Group
1) Genetic study of neuropsychiatric disorders. Linkage and association analyses, expression profiles from human and animal tissues, and animal model study of schizophrenia, depression, substance abuse/dependence, developmental disorders.
2) Genetic study of asthma/allergy. Linkage and association analyses, expression profiles from human and animal tissues, and animal model study of bronchial asthma, allergic rhinitis and atopic dermatitis.
3) Genetic diagnosis and counseling

Projects for Regular Students in Doctoral or Master’s Programs
1) Molecular pathophysiology and therapeutic trials for schizophrenia, depression and developmental disorders based on genetic evidence.
2) Identification of novel genomic mutations associated with asthma/atopy and development of genetic markers and therapeutic materials for personalized medicine of asthma and pollinosis.

Study Programs for Short Stay Students (one week ~ one trimester)
1) Genetic testing, genotyping, expression analyses,
2) Genetic informatics

Major Scientific Interests of the Group
Experimental studies, using murine models and cultured cells, for elucidation of the roles of transforming growth factor-β related molecules in stem cell biology, tissue formation and carcinogenesis. Our aim is to establish novel molecular targeting therapies useful for the prevention of cancer.

Projects for Regular Students in Doctoral or Master’s Programs
1) Molecular mechanisms of TGF-β related molecules (TMEPAI, MafK, Gpnmb etc.) in stem cell maintenance and carcinogenesis using gene-manipulated mice and three dimensional histopathological analysis.
2) Molecular mechanisms of TGF-β related molecules (THG-1) in squamous cell carcinoma formation

Study Programs for Short Stay Students (one week ~ one trimester)
1) Pathological tissue preparation, Immunohistochemistry and 3D reconstruction
2) In vitro tumorigenic assays (cell proliferation, sphere forming assay, scratch assay, matrigel invasion assay, 3D culture invasion assay etc.)

Major Scientific Interests of the Group
Kidney pathology is the main issue in our group. Current interests include podocyte pathology, pathophysiology of FSGS, systemic vasculitis (ANCA-related) and cystogenesis in polycystic kidney. Vascular pathology in chronic kidney disease is another focus in our group.

Projects for Regular Students in Doctoral or Master’s Programs
1) Pathophysiology and molecular mechanisms of focal segmental glomerulosclerosis from the view of podocyte and parietal cell transdifferentiation.
2) Morphologic investigation in systemic vascular changes and kidney injury.

Training Programs for Short Stay Students (one week ~ one trimester)
1) Diagnosis of human kidney biopsy samples according to the specific interest.
2) Immunohistochemistry and molecular biologic techniques using podocyte-specific transgenic animals.

Assistant Professor; Shoko Saito, Kohsuke Kato, Atsushi Kawaguchi

Major Scientific Interests of the Group:
The research aim of this group is to understand the molecular mechanism of replication and pathogenicity of animal viruses such as influenza viruses, measles virus, adenovirus, human cytomegalovirus, etc. The structure and function of virus-encoded factors and host cell-derived factors involved in the above processes are being studied at the atomic, molecular, cellular, and body levels. In addition, we are particularly interested in clarifying the physiological function of identified host factors such as chromatin regulators, molecular chaperones, etc. as well as their roles in infection.

Projects for Regular Students in Doctoral or Master’s Programs:
1) Identification and characterization of novel factors in virus replication
2) Control of virus diseases based on the knowledge of host defense systems, or through development of novel anti-viral drugs
3) Regulatory mechanism for the structure and function of chromatin
4) Leukemogenic mechanism by chromosomal translocation

Study Programs for Short Stay Students (one week ~ one trimester):
1) Discovery of novel factors using an influenza virus replicon system in yeast
2) Action mechanism of an anti-virus drug
3) Cell-free reconstitution of a nucleus
4) Molecular function of a fusion gene product(s) in oncogenesis

Other Faculty Members  
Assistant Professor Yasuhiro Shinkai: ya_shinkai@md.tsukuba.ac.jp

Major Scientific Interests of the Group

This laboratory addresses the mechanisms by which chemicals causing oxidative stress and environmental electrophiles such as polycyclic aromatic hydrocarbon quinones, methylmercury and arsenic affect living systems by interacting with sensor proteins with reactive thiols (thiolate ions) through chemical modification. The observations obtained by this group regarding environmental electrophiles have lent new insight into mechanisms of redox-dependent cell signalings such as cell survival, cell proliferation and cell damage.

Projects for Regular Students in Doctoral or Master’s Programs

1) Activation of electrophilic signal transduction pathways (e.g., PTP1B/EGFR-, Keap1/Nrf2-, HSP/HSF-1-signalings) during exposure to environmental electrophiles such as 1,2-naphthoquinone and methylmercury.
2) Search for cellular systems regulating sensor proteins covalently modified by the environmental electrophiles.

Study Programs for Short Stay Students (one week ~ one trimester)

1) Detection of cellular proteins modified by environmental electrophiles by Western blot analysis with specific antibodies against the electrophiles.
2) Proteomics analysis by using 2D-SDS/PAGE and MALDI-TOF/MS.

Major Scientific Interest of the Group:
Radiation biology is a field of medical sciences dealing with research on the biological actions of ionizing radiation on life or living things. In this field, it is essential to establish robust methods to evaluate and measure biological phenomena by physical parameters. The mission of this group is to clarify the biological characteristics of x-rays and proton beams and to improve the safety and efficacy of x-rays and proton beam radiotherapy.

Projects for Regular Students in Doctoral or Master's Program
1) Proton beam induced DNA damage and repair,
2) Radiation induced tumor immunological reactions,
3) Biological effects of x-ray micro beams,
4) Radiation protection.

Study Programs for Short Stay Students (2 weeks – 6 months)
1) Cell culture techniques and basic in vitro radio sensitivity assays
2) Methods to evaluate DNA damage in cells and tissues
3) Studies on physical parameters to evaluate biological effects

We are studying mechanisms of cardiovascular and respiratory regulation by the central nervous system. Especially, we are paying attention to the autonomic nervous system for the circulatory and respiratory system.

Projects for Regular Students in Doctoral or Master’s Programs
Cardiovascular and respiratory regulation by the central nervous system plays crucial roles in homeostasis. Disorder of this system causes serious problems in a living body. Despite this, it has been remained that lots of unknown mechanisms in the cardiovascular and respiratory center. Now, we are studying cardiovascular and respiratory regulation by the autonomic nervous system using electrophysiological methods in situ and in vivo, and trying to investigate relationship between disorder of the neurogenic regulation and cardiovascular and respiratory diseases.

Study Programs for Short Stay Students (one week ~ one trimester)
1) Recording of cardiovascular and respiratory parameters in human and rodent.
2) Physiological analysis of cardiovascular and respiratory parameters in human and rodent.

Major Scientific Interests of the Group

Our group studies the molecular mechanism of the cell reprogramming to establish an efficient method of the production of well-reprogrammed iPS cells by using our unique gene transfer system (SeVdp vectors). We are also trying to apply these vector to establish safe cell-differentiation systems.

Projects for Regular Students in Doctoral or Master’s Programs
1) Molecular mechanism of iPS cell production by analyzing series of partially reprogrammed cells induced by SeVdp vectors.
2) Establishment of iPS cell production methods with novel factors which improve cell reprogramming.
3) Development of SeVdp vector-based methods to produce differentiated tissues without contaminating undifferentiated cells.

Study Programs for Short Stay Students (one week ~ one trimester)
1) Production of mouse and human iPS cells using SeVdp vectors.
2) Cell biology and molecular biology experiments for analysis of gene expression.

Associate Professor Hiromasa Funato, M.D., Ph.D.

Major Scientific Interests of the Group
1) Exploring genes regulating sleep/wake
2) Real-time visualization and manipulation of neuronal mechanisms controlling sleep/wake
3) Finding new drugs for sleep disorders

Projects for Regular Students in Doctoral or Master’s Programs
1) Large-scale, forward genetic screening of genes responsible for sleep/wake regulation in
   mutagenized mice
2) Chemical biology for orexin receptor agonists
3) Analysis of sleep and wakefulness in genetically modified mice
4) In vivo real-time imaging of neuronal activities in the hypothalamus and other deep brain
   structures in freely behaving mice

Training Programs for Short Stay Students (one week ~ one trimester)
1) EEG/EMG electrode implantation and recording in mice
2) Patch clamp recording in cells and brain slices
3) Imaging of nerve cell activities in brain slices
4) Cell-based assay for GPCR activation

Principal Investigator: Hiromasa Funato
E-mail address: funato.hiromasa.km@u.tsukuba.ac.jp

Major Scientific Interests of the Group
1) Identification of novel genes that regulate sleep/wakefulness behavior using forward genetic approach.
2) Molecular mechanism underlying feeding and body weight homeostasis, anxiety and depressive behavior

Projects for Regular Students in Doctoral or Master’s Programs
1) Functional characterization of novel sleep-regulating genes
2) Combined approaches using viral vectors and gene-modified mice to uncover neural circuits underlying sleep/wakefulness behavior, feeding and body weight homeostasis, and anxiety and depressive behavior

Training Programs for Short Stay Students (one week ~ one trimester)
1) Basic skills for EEG/EMG-based sleep analysis
2) Histological analysis using immunohistochemistry and in situ hybridization
3) Behavioral analysis of viral vector-injected mice.

Major Scientific Interests of the Group
1) RNA Interference and MicroRNAs
2) Sleep Research
3) Odor-induced Innate Fear

Projects for Regular Students in Doctoral or Master’s Programs
1) We use genetic screen and biochemical fractionation to identify novel factors (e.g. R2D2, C3PO, and others) and characterize their precise functions in the RNA Interference (RNAi) and MicroRNA pathways.
2) We will understand the molecular circuits of Sleep/Wake control, a fundamental mystery in neuroscience, by integrating mouse genetic screen, quantitative mass spectrometry, and biochemical reconstitution.
3) We are conducting the first genetic screen in mice in search of the “fearless” mutants to understand the molecular circuits of odor-induced innate fear (of predator).

Training Programs for Short Stay Students (one week ~ one trimester)
1) Molecular cloning
2) Fear screen
3) Sleep recording

Major Scientific Interests of the Group  
After receiving my medical degree from the University of Tsukuba in 2001, I continued to pursue a research-oriented career in neuroscience, focusing on regenerative medicine, adult neurogenesis and memory in particular. My experience abroad and career thereafter provided me with a firm grasp of world-class techniques (optogenetics, neuronal tracing, behavioral neuroscience, etc.) but furthermore, with an open-mindedness in understanding both Western and Eastern cultures and sufficient communication abilities (fluent English and intermediate-level Chinese) all so vital in scientific research today. Currently, at IIIS our group strives to investigate the relation between sleep and memory. We hope to clarify the still unanswered questions regarding narcoleptic and cataplectic attacks, neuronal networks possibly involved in sleep-wake transitions as well as the further elucidation of sleep stages, REM, non-REM and slow wave sleep and its significance towards memory consolidation. I welcome motivated and self-driven students and researchers interested in sleep and memory anytime.

Projects for Regular Students in Doctoral or Master's Programs  
1) Function of sleep in memory consolidation  
2) Sleep regulation by GABA neurons in the VLPO  
3) Mapping brain regions activated in each sleep stages  

Training Programs for Short Stay Students (one week ~ one trimester)  
1) Optogenetic stimulation of target brain regions  
2) Tracing neuronal circuit using virus vectors  
3) Analyzing memory trace using mouse genetics

Major Scientific Interests of the Group
1) Role of adenosine and dopamine in sleep-wake regulation
2) Motivational state as fundamental regulator of sleep and wake
3) Exploring methamphetamine-sensitive circadian oscillation

Projects for Regular Students in Doctoral or Master’s Programs
1) Neuronal mechanisms of dopamine in sleep-wake regulation
2) Characterization of neuronal firing in the nucleus accumbens during sleep-wake states
3) Role of cannabinoid or opioid receptors in the striatum for sleep-wake regulation

Training Programs for Short Stay Students (one week ~ one trimester)
1) EEG/EMG electrode implantation and recording in mice
2) Engineering and production of adeno-associated viruses
3) Opto-/pharmacogenetic modulation of neural circuitry by using stereotaxic microinjections of viral vectors
4) Immunohistochemistry and in situ hybridization of brain tissue

Major Scientific Interests of the Group
Transcriptional control is a key step for development, stress response, and various diseases in human beings. We focus on understanding the molecular mechanisms of transcription control. Our lab has three groups (molecular biology, mouse, and Drosophila), which are using different methods, but focus on the same transcriptional regulators.

Projects for Regular Students in Doctoral or Master's Programs
1) Role of nuclear oncogene products Myb and Ski in cancer
2) Epigenetic regulation by ATF-2 family transcription factors
3) Mechanism of iPSC generation

Training Programs for Short Stay Students (one week ~ one trimester)
1) Molecular biology experiments for studying transcriptional control
2) Genetic experiments using Drosophila and mice

Major Scientific Interests of the Group
The objectives of our research group are to develop appropriate medical technologies that are transferable to developing countries, in order to promote their primary health status. The following two subjects are our biggest research targets.
1) Research on controlling emerging and re-emerging infectious diseases of international importance.
2) Research on international medical cooperation.

Projects for Regular Students in Doctoral or Master's Programs
1) Biology and pathophysiology of re-emerging infectious diseases
   (a) Basic and clinical research on malaria
   (b) Research on the development of malaria vaccine
2) Social technology development for controlling diseases in developing countries
   (a) Researches on global malaria and parasite control strategy
   (b) Evaluation of international health cooperation projects

Training Programs for Short Stay Students (one week ~ one trimester)
1) In vitro culture of Plasmodium falciparum and its drug susceptibility assay
2) Discrimination of parasite species by PCR and other methods, including drug resistant DNA marker detection.

Major Scientific Interests of the Group
In vitro production of red blood cells (RBCs) able to be used in the clinic. For this purpose, we are attempting to establish immortalized human RBC progenitor cell lines from various cell sources such as hematopoietic stem cells, ES cells and iPS cells. In addition, we are studying the mechanisms of enucleation of RBC progenitor cells so as to improve the efficiency of in vitro enucleation.

Projects for Regular Students in Doctoral or Master’s Programs
1) Cell culture of human ES and iPS cells. Induction of hematopoietic cells from human ES and iPS cells. Establishment of immortalized human hematopoietic cell lines from various cell sources such as hematopoietic stem cells, ES cells and iPS cells.
2) Molecular mechanisms of enucleation of RBC progenitor cells.

Training Programs for Short Stay Students (one week ~ one trimester)
1) Cell culture of mouse ES or iPS cells.
2) Cell analysis by flow cytometer.

Major Scientific Interests of the Group:
In-depth analyses of ubiquitin-, proteasome-, and autophagy-mediated regulatory proteolysis.

Projects for Graduate Students:
1) Molecular mechanisms for assembly and diversity in eukaryotic proteasomes. 2) Physiological and Pathological roles of the autophagy system. 3) Control of mitochondrial homeostasis by PINK1/Parkin whose impairment causes Parkinson’s disease.

Study Programs for Short Stay Students (one week ~ one trimester):
1) Enzymatic assays and affinity purification of eukaryotic proteasomes. 2) Ubiquitylation assays directed by Parkin and SCFFbs ubiquitin E3 ligases. 3) Assays for monitoring autophagy based on genetically engineered mice.
